TNM Classification of Malignant Tumours, Eighth Edition provides the latest, internationally agreed standards to describe and categorize cancer stages. Published in affiliation with the Union for International Cancer Control (UICC), this authoritative pocket-sized guide contains important updated organ-specific classifications that oncologists and other professionals who manage patients with ...Lung cancer, also known as lung carcinoma, is a malignant lung tumor characterized by uncontrolled cell growth in tissues of the lung. This growth can spread beyond the lung by the process of metastasis into nearby tissue or other parts of the body. Most cancers that start in the lung, known as primary lung cancers, are carcinomas. The two main types are small-cell lung carcinoma (SCLC) and ...Human papillomavirus-positive oropharyngeal cancer (HPV+OPC) is a subtype of oropharyngeal squamous cell carcinomas (OSCC), associated with the human papillomavirus type 16 virus (HPV16). Historically, cancer of the throat oropharynx (throat) was associated with the use of alcohol and tobacco, but the majority of cases are now associated with the HPV virus. Lung cancer is an aggressive and heterogeneous disease. 1,2 Advances in surgical, radiotherapeutic, and chemotherapeutic approaches have been made, but the long-term survival rate remains low. 3 ...
