The impact on architects and architectural design was profound and far-reaching, with welfare state projects moving centre-stage in architectural discourse not just in Europe but worldwide. This is the first book to explore the architecture of the welfare state in Western Europe from an international perspective. While both are amongst countries with the highest share of social rental housing in Europe, each represents a different type of welfare state and of social housing provision – following Kemeny's classification, a unitary system (the Netherlands) and a dualist system (England). Architecture and the Welfare State is a valuable contribution – it offers nuanced scrutiny of a period when wealth redistribution by the state was a broadly accepted process in which the built environment figured prominently. It largely delivers on its underlying claim to place the architect (and architecture) more clearly as an actor within complex social, political, cultural economic and technological networks.
